ICL **TECHNICAL** **JOURNAL**

Volume 4 Issue 4
November 1985

Contents

Volume 4 Issue 4

Foreword <i>Asa W. Lanum</i>	351
History of the ICL content-addressable file store (CAFS) <i>J.W.S. Carmichael</i>	352
History of the CAFS relational software <i>A.T.F. Hutt</i>	358
The CAFS system today and tomorrow <i>G.McC. Haworth</i>	365
Development of the CAFS-ISP controller product for Series 29 and 39 systems <i>N. Macphail</i>	393
CAFS-ISP: issues for the application designer <i>R.M. Tagg</i>	402
Using secondary indexes for large CAFS databases <i>P.R. Wiles</i>	419
Creating an end-user CAFS service <i>C.E.H. Corbin</i>	441
Textmaster — a document-retrieval system using CAFS- ISP <i>M.H. Kay</i>	455

CAFS and text: the view from academia <i>L. Burnard</i>	468
Secrets of the sky: the IRAS data at Queen Mary College <i>D. Walker</i>	483
CAFS file-correlation unit <i>E. Babb</i>	489
Patents relating to the ICL content-addressable file store CAFS	504
Notes on the authors	506
Subject index to Volume 4	511
Author index to Volume 4	518

Foreword

On the 21st April 1985 it was announced that the Queen's Award for Technological Achievement had been presented to ICL in recognition of the successful innovation represented by the development of CAFS-ISP.

The problem of accessing large amounts of data in a structured manner, so as to present usable information within a reasonable time, began to be recognised as early as 1962. The CAFS system is a combined hardware and software solution to this problem. Additionally, it is especially well positioned because throughout the development there has been a clear understanding that any technological breakthroughs achieved in solving the problem must fit into the real world of existing customer data and equipment.

The CAFS-ISP product clearly represents a breakthrough worthy of the Queen's Award, and as such is one of the unique technological advances in the data-processing industry today. As a vehicle it is just now being recognised by other organisations trying to provide comparable data-access capabilities.

This issue of the *ICL Technical Journal* reviews the history of the development of CAFS from the first recognition and formalisation of the problem through to the evolution of the physical solution, and also the history of the supporting software. In addition it illustrates the use of the product in the real world, showing how this has extended from the original closely defined problem of data access to include the processing of text and other forms of information by real users to solve real problems.

Asa W. Lanum
Director and General Manager, ICL Applied Systems
